DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 3/30/2007 have been fully considered but they are not persuasive. The applicant asserts that the prior art or combination thereof fails to disclose newly recited claim language of "wherein the current blocking device is electrically isolated from any power source". The examiner asserts that this is new matter. The specification does not disclose that the current blocking device is electrically isolated from a power source.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-20 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claims 1-20 recite "wherein the current blocking device is electrically isolated from any power source". The specification does not disclose that the current blocking device, the hum eliminator, is electrically isolated from any power source or give any disclosure as to what this language means.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5,170,081 to Adachi et al. discloses a ground isolation circuit.

US 6,226,162 to Kladar et al. discloses a surge suppression network responsive to the rate of change of power disturbances.

US 6,427,011 to Sacca discloses a modem data access arrangement without diode bridge.

US 4,979,218 to Strahm discloses a balanced output circuit.

US 5,646,810 to Funke discloses a transient voltage surge suppression and electrical noise attenuation circuit.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2615

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
